Course Project: Hotel Bookings

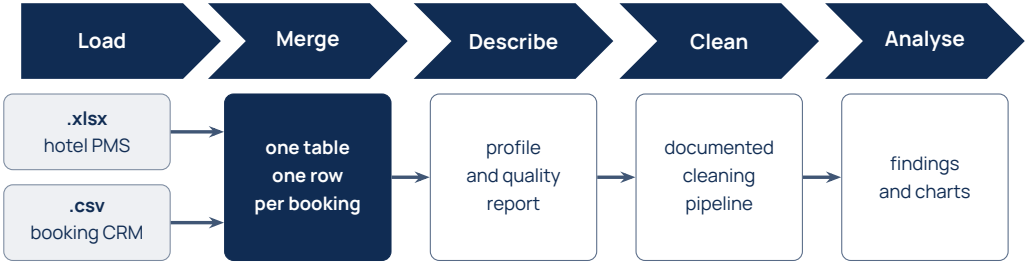

Pandas & Data Manipulation · Project brief

Mattia Sabella

PhD Student at Politecnico di Milano

November 2026 • Albert School × Politecnico di Milano

Merge two sources, then describe and clean

YOUR TASK

Two hotel systems exported data with same bookings. Find which columns mean the same thing, merge the two files, describe the data, then clean it with what you learned in the course.

About 25,000 bookings in two dirty files

File	Size
`hotel_reservations_pms.xlsx`	24,480 rows
`hotel_bookings_crm.csv`	24,608 rows

HINTS

1. Some columns exist in both files
2. Some bookings appear in only one file

Deliver a 10-minute talk and a pipeline

2
students per team

10 + 5
minutes of talk, then Q&A

1
reproducible cleaning pipeline

PRESENTATION

1. How you merged it
2. The problems you found
3. Your analysis: findings backed by charts (before & after)

CODE: .ipynb OR .py

- Runs top to bottom on the raw files, no manual edits
- Load, merge, assess, clean, export the clean table
- Every cleaning step commented: what, why, rows before and after
